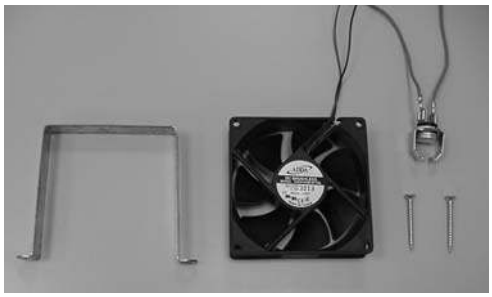
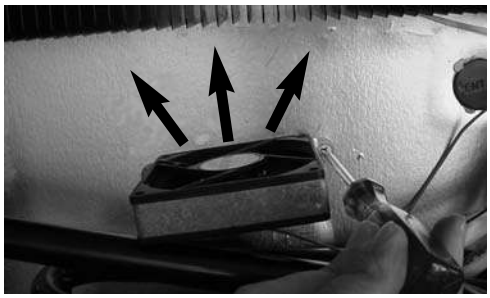
9.0 VENTILATION KIT

(Part Nummer: 241 2985-00)



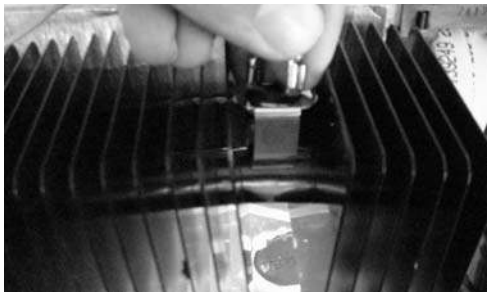
CONTENTS

Reinforcing plate with doublesided adhesive tape
Metal holder for ventilator
12V-DC-ventilator
Bimetal-switch with connection cable

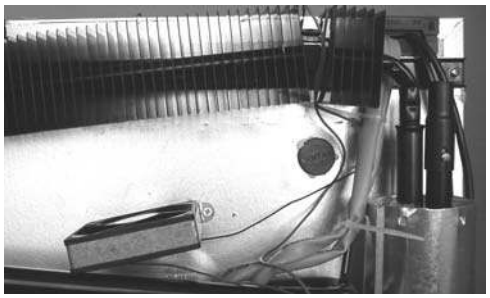


Mount ventilator with holder and two screws between condenser and absorbtion unit. *(Use reinforcing plate at appliances with no metal rear!)*.

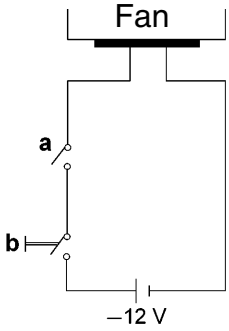
IMPORTANT! The ventilator has to be installed with the same slope like the condenser fins. By this the generated air stream is always lead in an upper direction.



The Bimetal-switch is clicked onto the condenser pipe, as shown.



Connect the cable to a permanent attached 12V DC power supply with the right polarity (mount an additional switch if wanted).



The cable must be laid in such a way that it does not come in contact with hot components of the unit/burner or with sharp edges.

Installing an additional fan is useful, if due to unfavourable built–in conditions and / or constantly high ambient temperature the ventilation of the cooling unit is affected, and there is worsening of cooling performance.
